Reviewer's report

Title: Evaluation of a tailored, multi-component intervention for implementation of evidence-based clinical practice guidelines in primary care physical therapy: a non-randomized controlled study

Version: 2
Date: 4 November 2013

Reviewer: Ilona Autti-Rämö

Reviewer's report:

The article is on an important topic. The increasing number of evidence based clinical guidelines can change the clinical practice only if they are being implemented. The authors have now responded to all my questions in a satisfactory way. The article is much clearer though still rather long. The process can now be understood and the results can be better interpreted. Also the transferability of the study design, method and results is easier to understand.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
