Reviewer's report

Title: A Cost-Utility Analysis of Drug Treatments in Patients with HBeAg Positive Chronic Hepatitis B in Thailand

Version: 2 Date: 13 March 2014

Reviewer: Milena Pavlova

Reviewer's report:

The paper is substantially improved and most of my comments are well addressed. But the following comments should be considered one more time:

1. Background: What is the practical relevance of this specific study for health policy/insurance in Thailand? This question is still only partially answered.

2. Methods: What is the size of the hypothetical cohort?

3. Conclusions: The conclusion section should be extended to place the results in the context of health policy/insurance in Thailand. This should be linked to the practical implications of the study motioned above with regard to the background section. See comment 1.

4. Although the authors state that their manuscript was checked by an English editor, there are still sentences with strange constructions, which meaning is unclear. Authors should make use of services of a professional editor to check the text.

5. One additional point: Amount in USD should be added after each amount in local currency.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
