Reviewer's report

Title: Effective access to health care in Mexico

Version: 3
Date: 17 February 2014

Reviewer: Martin Gulliford

Reviewer's report:

This revision has addressed all of my previous comments. The manuscript is generally well constructed and well written.

Minor essential revisions:
the abstract refers to the 'opportuneness' of health care. I am not familiar with this use of the term. In the text, this concept does not seem to be adequately defined - referring to location and opening hours. This may include geographical accessibility and organisation barriers to access. 'Accessibility' may be equated with 'opportuneness'. Also, 'access' is considered by many to be a dimension of 'quality'. So there has been loose use of important terms in the MS.

A Spanish spelling of 'protection' has been used in the Figures.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
I have no competing interests.
