Author’s response to reviews

Title: Knowledge and experience sharing practices among health care professionals in hospitals under the Addis Ababa health bureau, Ethiopia

Authors:

Mulusew Mr Andualem (muler_hi@gmail.com)

Version: 10 Date: 21 August 2014

Author’s response to reviews:

This article is the first article in the study area. The findings are so vital in showing the current status of knowledge and experience sharing practices in the study area. Based on this result, most of the respondents need to share their knowledge and experience to their staffs, but it is almost none practical due to several reasons. Health professionals are vital components in delivering quality health care services to their customers. To do this, they should be updated to the recent health related information and technologies. Therefore, this finding will serve as a baseline information source for health care professionals, health officials, and other concerned bodies to plan and take action on the issue.

The best way to disseminate such valuable resources is publishing recent findings at open resource publishing sites. To do this, BMC publishing site is an ideal place, that is why I need to send this manuscript to this site to be published and accessed openly.

Based on the given comments from BMC reviewers and assigned manuscript editors, the manuscript is greatly improved in its all sections. The overall contents of the manuscript and language are seen by the author, Dr. Felur Fritz, and Mr Molla Abebe in detail and all the possible modifications/changes are made to increase the quality of the curriculum. More than two weeks time were given the editors to see and do all the necessary editions or changes on the manuscript. The author did his best edition several times before receiving the comments from the assigned editors and after they returned the commented manuscript, he did those additional comments on the manuscript as necessary as possible. You can see or compare the old and new version of the manuscript to check the changes.
