Title: Process evaluation of the development of a Cognitive Behavioural Therapy intervention for fear of falling: Contested understandings, uncertainties, and complexities

Version: 2 Date: 31 July 2014

Reviewer: Elin Dysvik

Reviewer's report:

This paper is now very much improved. The authors have answered my points sufficiently well to allow their manuscript to be published.

Discretionary Revisions: I still wonder if RCT should be listed in the key words as the data reported are collected in the intervention developing phase and highlight the need for in-depth exploratory work before the RCT protocol is developed.
