Reviewer's report

Title: Audit of head injury management in Accident and Emergency at two hospitals: Implications for Nice CT guidelines.

Version: 1 Date: 27 January 2004

Reviewer: Bertil Romner

Reviewer's report:

General

--------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

The work is of a retrospective nature. However, this information is of great interest for future prospective analysis. The cost-effective analysis by the use of NICE guidelines should be discussed. Also, the drawback of frequent CT scan in the same patient needs to be discussed. Management of mild head injury in children? CT or admission?

--------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

--------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

--------------------------------------------------------------------------------------------------

What next?: Unable to decide on acceptance or rejection until the authors have responded to the major compulsory revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable
