Reviewer's report

Title: The influence of completing a health-related questionnaire on primary care consultation behaviour

Version: 4 Date: 27 June 2006

Reviewer: tess Harris

Reviewer's report:

General

This is an interesting and well written article that addresses an important question for primary care researchers.

The background is well written and provides a good summary of the rationale for the study.

The methods and results are clearly written and easy to follow. Figures 1&2 and table 1 are well presented.

The discussion is balanced and places the findings in the context of other work.

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

None

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

None

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

None

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests
