Reviewer's report

Title: Vitamin A supplementation in Tanzania: The impact of a change in programmatic delivery strategy on coverage

Version: 2 Date: 20 September 2006

Reviewer: Rolf Klemm

Reviewer's report:

General
I have read the revised manuscript (MS 1494534946102472) and feel the authors' comments and manuscript revisions adequately address my original criticism. The revised manuscript, however, has minor grammatical errors which should be corrected. One additional issue is related to the authors' use of the term "equity" in their discussions, but they do not clearly specify how they define equity. Their results clearly show similar coverage rates across the SES, gender and other strata, but it is not clear to me that these variables capture "equity" because they have not defined this term.

-------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)
