Reviewer's report

Title: The contribution of qualitative research in designing a complex intervention for secondary prevention of coronary heart disease in two different healthcare systems [ISRCTN24081411]

Version: 4 Date: 30 June 2006

Reviewer: Peter Murchie

Reviewer's report:

General
An interesting and well written paper that contributes significantly to the literature on the methodology of designing complex healthcare interventions. The authors have addressed all of my previous comments and

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

None required in my opinion.

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

None required in my opinion.

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

None required in my opinion.

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
