Reviewer's report

Title: Demand for emergency health service: factors associated with inappropriate use

Version: 3 Date: 12 July 2007

Reviewer: Albert Lee

Reviewer's report:

Thank you for asking to review the revised manuscript. I would like to congratulate the authors as they have polished up the manuscript very well compared to first submission. Just one suggestion for Discretionary Revisions: The inappropriate utilization for elderly is associated with schooling. I suggest to rephrase the word schooling to level of education so the readers would interpret easily. I am happy to recommend for publication.
