Reviewer's report

Title: Determinants of the range of drugs prescribed in general practice: a cross-sectional analysis

Version: 2 Date: 4 June 2007

Reviewer: Paul Emile Marie P.E.M. Muijers

Reviewer's report:

General: The conclusion: 'the range of drugs prescribed is a promising concept that could be used in addition to prescribing volume (and other prescribing-indicators?)' is not very impressing.

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached):

Suggestions for major essential revisions have been followed out.

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

OK

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept without revision

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
