Reviewer’s report

Title: Combining evidence and values in priority setting: testing the balance sheet method in a low-income country

Version: 3 Date: 9 March 2007

Reviewer: Rob MPM Baltussen

Reviewer’s report:

General
The authors have made many efforts to accommodate earlier comments, and I agree with the changes the authors have made.

The only minor comment I have is that they should be consistent when referring to the WHO-CHOICE database (they still mention WHO generalised cost-effectiveness database a number of times in the text).

--------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

--------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

--------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)
