Reviewer's report

Title: Integration in primary community care networks (PCCNs): examination of governance, clinical, marketing, financial, and information infrastructures in a national demonstration project in Taiwan

Version: 3 Date: 16 March 2007

Reviewer: Runo Axelsson

Reviewer's report:

General: Some improvements have been made, for example a description of the health system of Taiwan has been added and the author has argued for the concept of marketing infrastructure, but the theoretical part of the article is still a bit confusing. This is particularly the case since the literature review is part of the methods section.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached): What is needed is a clear theoretical framework introducing the main concepts of the article.

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Unable to decide on acceptance or rejection until the authors have responded to the major compulsory revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
