Title: Support for a tax increase to provide unrestricted access to an Alzheimer's disease medication: a survey of the general public in Canada

Version: 2 Date: 2 October 2009

Reviewer: Hideo Yasunaga

Reviewer's report:

Reviewers report
Major Compulsory Revisions
1. The authors should carefully discuss bias problems of the WTP elicitation method they used in the present study, in comparison with other standard methods (for example, dichotomous choice method).
2. The average WTP should be presented for each of the four scenarios. The difference of the average WTP should be analyzed between S1 and S2, between S3 and S4, between S1 and S3, and between S2 and S4.
3. Multivariate regression analyses should be conducted to estimate the determinants of WTP.

Minor Essential Revisions
None

Discretionary Revisions
None

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
