Reviewer’s report

Title: Assistive technology use and human rights enjoyment: A cross-sectional study in Bangladesh

Version: 3 Date: 31 July 2012

Reviewer: Bolajoko O. Olusanya

Reviewer’s report:

My comment on the companion paper on the issue of verbal consent is also applicable to this paper. It is rather unfortunate that internationally acceptable ethical standards were somehow compromised. The authors may wish to address this issue to the satisfaction of the editors given the circumstances of this study.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
