Reviewer's report

Title: An evaluation of health knowledge and health experiences of disadvantaged people in Eastern Nepal following participatory support.

Version: 1 Date: 26 February 2012

Reviewer: Fahimeh Ramezani Tehrani

Reviewer's report:

My comments to the manuscript are as follows:
1- The manuscript does not fulfill criteria for an original article.
2- Research methodology is not clear and concise. Paper is well not organized or comprehensive regarding:
   A: What kind of method has been used? A mixed method, sequential qualitative – quantitative method or any other?
   B: Has any checklist been used for data gathering, apart from observation?
   C: What kind of interview(s) was used? FGD, individual interviews…. and what were the related protocols?
3- Four references are just not enough; this limits reaching a proper conclusion.
4- Limitations of the work have not been clearly stated.
5- The acknowledgment was okay.
6- Both title and abstract need revision.
7- The writing needs to be revised by a native speaker of English.

Level of interest: An article of insufficient interest to warrant publication in a scientific/medical journal

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
