Reviewer's report

**Title:** Knowledge and attitude regarding injection safety among primary health care workers in Baglung district, western Nepal

**Version:** 1  **Date:** 19 October 2012

**Reviewer:** Guitele Rahill Rahill

**Reviewer's report:**

1. This is an article that reports findings from research conducted with underserved and underrepresented populations of residents of a rural region in Nepal, and as such it is important.
2. Given that there are only 58 some health care facilities in the region, it would have been useful to obtain interviews/surveys in at least a third (roughly 20) of these health care settings in order to obtain a greater understanding of injection safety in that context.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Needs some language corrections before being published

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests.
