Reviewer's report

Title: Alcohol use and extramarital sex among men in Cameroon

Version: 3 Date: 20 June 2007

Reviewer: Ulla Larsen

Reviewer's report:

General
Table 3 includes a number of dichotomous variables. I fail to see a justification for making all these variables dichotomous. For example, the variables men's age and age at first intercourse should have three categories, as shown in Table 2. For these two variables each category was significantly different in the univariate analysis.
I suggest that Table 4 be deleted. It is sufficient to refer to correlations in the text.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
