Reviewer's report

Title: A cluster randomized controlled trial investigating the impact of different modes of vitamin B12 supplementation on neuroconduction and cognitive function among older people living in Santiago, Chile. A study protocol [ISRCTN 02694183].

Version: 2 Date: 5 August 2011

Reviewer: Alan Dangour

Reviewer's report:

A significantly improved report.

Please specify the primary neurological outcome measure - is it conduction velocity or amplitude of the peroneal nerve?

MMSE is really a screen for dementia rather than a test of cognitive function. Are you sure that you want to have it as your primary cognitive function outcome?

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
