Reviewer’s report

Title: Association of Methylentetrahydrofolate Reductase (MTHFR) 677 C > T Gene Polymorphism And Homocysteine Levels In Psoriasis Vulgaris Patients From Malaysia: A Case-Control Study.

Version: 1 Date: 3 October 2011

Reviewer: Claudia Oliveira

Reviewer’s report:

There is an interesting paper that evaluated if the MTHFR gene polymorphism could be associated with the pathogenesis of psoriasis vulgaris as seen in another populations than Asians.

The manuscript is good however, the authors needs explain more about the pathogenesis about this polymorphism and psoriasies in the discussion section. After this revision the manuscript can be accepted

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
