Reviewer’s report

Title: Food venue choice, consumer food environment, but not food venue availability within daily travel patterns are associated with dietary intake among adults, Lexington Kentucky 2011

Version: 2 Date: 22 December 2012

Reviewer: Angela Liese

Reviewer’s report:

This manuscript is much improved from the earlier version.

One last suggestion pertaining to the results shown in Table 3 would be to state the findings, even if they were negative, and not simply say that no significant associations were found.

My only other suggestion is that the authors may want to carefully review their manuscript for typographical errors. Specifically, I noticed some instances where the word "individual's" was incorrectly used instead of "individuals" or "individuals' ". I also noticed a change in tense in some sentences in the methods section and the results section.

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
