Reviewer's report

Title: Higher Plasma Homocysteine in Non-Alcoholic Fatty Liver Disease (NAFLD)

Version: 1 Date: 1 November 2012

Reviewer: Ali Sazci

Reviewer's report:

This manuscript is a wonderful study which indicates an association between Hcy levels and NAFLD in a Brasilian population. Although they did not see an association between MRHFR C677T and A1298C polymorphisms and NAFLD, the population size is rather small. However there is a marked increase in TT Genotype in patients (17.21%) than controls (4.44%). Finally the text needs language corrections. it may be accepted for publication in the Journal.

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
