Reviewer's report

Title: Outdoor exposure and vitamin D levels in urban children with asthma

Version: 1 Date: 14 January 2013

Reviewer: Augusto Litonjua

Reviewer's report:

The authors present an analysis of vitamin D levels and outdoor exposure assessment and asthma and allergy phenotypes in a cohort of inner city children. The manuscript is well-written and the authors discuss the limitations.

Minor Essential Revision

I think Figure 1 should be redone to make it clearer. I think a distribution plot would be better - the N on the y axis and vitamin D levels on the x axis. The graph can be a bar graph or a smoothed plot and they can put a line through the mean.

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
