Reviewer’s report

Title: A systematic review and meta-analysis of the effect and safety of ginger in the treatment of pregnancy-associated nausea and vomiting

Version: 2 Date: 5 March 2014

Reviewer: Ronna L Chan

Reviewer’s report:

Comments to Authors:

This version of the manuscript is more polished and the study results are now presented in a much more succinct and clear manner. I appreciate the efforts put forth by the authors. Other than a minor editorial fix, which I have noted below, the authors have addressed satisfactorily all of my concerns and comments with regards to this manuscript.

Major Compulsory Revisions
The author must respond to these before a decision on publication can be reached.

NONE

Minor Essential Revisions
The author can be trusted to make these. For example, missing labels on figures, the wrong use of a term, spelling mistakes.

Please review and revise the following paragraph on page 26: “…and dimenhydrinate significantly increased the risk of drowsiness compared to ginger. Inger therefore does not seem to pose a risk for any major side-effects…”

Discretionary Revisions
These are recommendations for improvement which the author can choose to ignore. For example clarifications, data that would be useful but not essential.

NONE

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
