Reviewer's report

Title: Effects of a 3-year dietary intervention on age-related changes in triglyceride and apolipoprotein A-V levels in patients with impaired fasting glucose or new-onset type 2 diabetes as a function of the APOA5 -1131T>C polymorphism: randomized, open label, controlled study

Version: 1 Date: 23 December 2013

Reviewer: Pavel Suchanek

Reviewer's report:

- Is the question posed by the authors new and well defined?

The questions defined by author are not entirely new, but are well defined.

- Are the methods appropriate and well described, and are sufficient details provided to replicate the work?

Yes, the methodology is well described and there is the assumption that it would be possible to repeat the experiment.

- Are the discussion and conclusions well balanced and adequately supported by the data?

- the lack of people with CC allele

- Do the title and abstract accurately convey what has been found?

yes
