Title: The study of anthropometric estimates in the visceral fat of healthy individuals

Version: 5 Date: 26 April 2014

Reviewer: Keun-Sang Yum

Reviewer's report:

Major Revision

comments:
In purpose of estimating visceral fat area, I do not understand that this equation is only used in healthy people and preventive medicine field. So, in this study, authors must included metabolic syndrome patients as well as healthy individuals.

Skinfoldness measurement's value is very sensitive, so measurement is needed very skillful person. Therefore abdominal subcutaneous fat thickness is changed according to the measuring person.

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
