Reviewer's report

Title: A single consumption of curry improved postprandial endothelial function in healthy male subjects: a randomized, controlled crossover trial

Version: 2 Date: 17 February 2014

Reviewer: Hirofumi Tomiyama

Reviewer's report:

Findings were interesting. This reviewer had some comments;
1. This is a cross-over study. So, in the analysis, the evaluation of the effect of cross-over manner of the difference of FMD between control and curry intake is proposal.
2. Was the absolute change of brachial arterial diameter (maximal - baseline) different between control and curry intake?
3. Was the change of FMD from fasting to postprandial associated with such change of markers of oxidative stress?

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
