Title: Prospective Double-Blind Randomized Study on the Efficacy and Safety of an n-3 Fatty Acid enriched intravenous fat emulsion in Postsurgical Gastric and Colorectal Cancer Patients

Version: 2 Date: 25 November 2014

Reviewer: Jay Whelan

Reviewer's report:

Page 11, line 176. As requested, the authors clarified the levels of n-3 PUFAs provided (i.e., 70-130 mg/Kg BW/d). In order to duplicate this study, why is there almost a 100% difference in the range supplemented? Please provide a brief explanation to the reader understands the rationale for the range. Was there a target amount that the investigators were trying to achieve? Some explanation needs to be provided.

- Discretionary Revisions (which are recommendations for improvement but which the author can choose to ignore)

As the reviewer, I am satisfied with how the authors have addressed the other areas of concern.
