Title: Dietary intakes and food sources of fatty acids in diets of Guatemalan schoolchildren: A cross-sectional study

Version: 3 Date: 13 October 2009

Reviewer: Pierre Astorg

Reviewer's report:

There are still two minor points to be corrected:

1. Title: as I already suggested, I prefer: "Dietary intakes and food sources of fat and fatty acids in Guatemalan schoolchildren: a cross-sectional study", which avoids the useless repetition of "dietary" and "diets" in the same sentence.

2. page 3, line 62: "...diets of Canadian Inuits are adequate in n-3 PUFA, but relatively low in n-6 *PUFA* (9)."

In fact, the level of intake of n-6 PUFA reported in ref. 9 is below the adequate intake used by the authors (Kuhlein et al.) for comparison, but appears to reach the cut-off of 5% of energy used in this manuscript.
