Reviewer's report

Title: Daily egg consumption in hyperlipidemic adults - Effects on endothelial function and cardiovascular risk

Version: 2 Date: 31 March 2010

Reviewer: Kevin Ballard

Reviewer's report:

Major Compulsory Revisions: I strongly feel that the authors adequately addressed the major revisions brought up in my initial review. These revisions have significantly strengthened the clarity and impact of the present investigation.

Minor Essential Revisions
- The columns in Table 3 are not aligned correctly (P=0.31 should directly follow the postprandial change value for the egg treatment group).
- I did not see a reference inserted within the text supporting differences in gastric emptying times.

Discretionary Revisions
None

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
