Reviewer's report

Title: Influence of two breakfast meals differing in glycemic load on satiety, hunger, and energy intake in preschool children

Version: 6 Date: 13 October 2010

Reviewer: FRANCESCA SCAZZINA

Reviewer's report:

This study simply demonstrates that different breakfasts exert different effects in the sampled (small) population. This could not at all be attributed to the sole GL and is therefore of limited or null interest.

The authors also failed to comment about my second point, regarding the actual relevance of their satiety measurement.

Level of interest: Reject as not of sufficient priority to merit publishing in this journal

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
