Reviewer's report

Title: Origins of electromagnetic hypersensitivity to radiation emitted by WCDMA mobile phones

Version: 1 Date: 29 May 2012

Reviewer: Kjell Hansson Mild

Reviewer's report:

The title contains the word "Origins" but this is not seen in the paper. Change the wording.

Key words: WCDMA and hypersensitivity are already in the title, no need to be also in keywords.

Page 4, Background: Why discuss the IARC 2 B in this context? This is a completely different thing.

On the other hand ref to the WHO workshop on this topic is missing:

Page 13. The part with Nakagawa et al should be in the Discussion section and not in Results.

In general the paper is missing the references to the work on EHS and physiological variables done by E Lyskov and coworkers.

Level of interest: An article whose findings are important to those with closely related research interests
Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:

I have no competing interest in relation to this paper.
