Reviewer’s report

Title: Evaluation of Maternal PCB Exposure related to Time to Pregnancy in Daughters

Version: 2 Date: 28 June 2013

Reviewer: Germaine Buck Louis

Reviewer’s report:

The authors are responsive to the suggested comments to the extent possible, and I concur saving in utero samples for more targeted research questions. The paper is important for stimulating further development of methods for analyzing chemical mixtures.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
