Reviewer’s report

Title: A big temperature decrease between two neighbouring days may increase the risk of childhood pneumonia

Version: 2 Date: 18 April 2014

Reviewer: Yasushi Honda

Reviewer’s report:

The points I made have been properly taken care of. I have no further comments for revision other than some English corrections.

I just would like to mention that dlnm requires specific treatment for seasonal analyses (described in Gasparrini’s document for dlnm overview or somewhere), which I assume the authors applied.

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
