Reviewer's report

Title: Facing the Challenge of Data Transfer from Animal Models to Humans: the Case of Persistent Organohalogens

Version: 6 Date: 17 October 2008

Reviewer: William Boyes

Reviewer's report:

The authors have satisfactorily addressed my substantive comments. I commend them for their thorough revision. The paper is markedly improved.

- Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
  1. The figures are introduced out of order in the text, with Figure 3 being introduced after Figure 6.
  2. There is a formatting problem in Table 1, with the text being cut off at the end of each cell.
  3. There are still a few minor grammatical problems. One more pass with the English language editor should fix them.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
