Reviewer's report

Title: Relationship between epicardial adipose tissue, coronary artery disease and adiponectin in a Mexican population

Version: 2  Date: 25 August 2014

Reviewer: Francesco Stea

Reviewer's report:

The manuscript has been greatly improved and all raised issues have been answered. A nonsense sentence remains:

Minor Essential Revisions
pages 4-5: "Patients were considered smokers if they had smoked five or more cigarettes a day and had suspended this habit for longer than one year" is probably "for LESS than one year".

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
