Reviewer’s report

Title: Relationship between epicardial adipose tissue, coronary artery disease and adiponectin in a Mexican population

Version: 2 Date: 21 August 2014

Reviewer: Sonia Eiras Penas

Reviewer’s report:

Although the authors have tried to address all the raised points by reviewer, there are several points that make its originality and methodology doubtful: the contradictory data regarding already published results and the absence of statistical analysis to test that epicardial fat thickness as an independent associated factor of CAD regarding other significant factors such as male, WC and smoking.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
