Reviewer’s report

Title: Mitral Supravalvular Ring: A case report

Version: 1 Date: 20 May 2005

Reviewer: Rosa Sicari

Reviewer’s report:

General
Serra et al. present a rare and interesting clinical case. The beautiful images, the rarity of the clinical syndrome are the reasons why the case report should be published. Authors also include a video which is self-explanatory.

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Maybe the authors should also provide MRI images in order to make their point.

There are, throughout the manuscript, many spelling and grammatical errors that should be correctd.

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published
