Reviewer's report

Title: Giant Aneurysm of the Atrial Septum Associated with Premature Closure of Foramen Ovale

Version: 1 Date: 20 May 2005

Reviewer: Rosa Sicari

Reviewer's report:

General
An interesting and well presented case report that should be published.
Discretionary Revisions (which the author can choose to ignore)
Maybe the authors should provide more echocardiographic images. It also would be helpful to the reader a schematic drawing of how, according to the main hypotheses reported, the FO prematurely closes during fetal life.

What next?: Accept after discretionary revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable
