Reviewer's report

Title: Mammoth Interatrial Septal Aneurysm in the ICE Age

Version: 3 Date: 6 August 2007

Reviewer: luca testa

Reviewer's report:

General
this case report shows a case of giant aneurysmal interatrial septum with a secundum ASD.

This report looks very well written and the topic is very interesting taking into account the ongoing debate about the management of patients with unexplained transient ischemic attack and/or migraine. In this setting, a simple screening test like the transthoracic echocardiogram can occasionally show an unexpected finding. The recent development of the IntraCardiac Echocardiography now allows to overwhelm the intrinsic limitation of the traditional imaging tool.

---------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

There is no need of major revisions

---------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

none

---------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

I would just appreciate a special effort to maximise the quality of the figures.

What next?: Accept without revision

Level of interest: An article of importance in its field

Quality of written English: Acceptable
