Reviewer's report

Title: The subaortic tendon as a mimic of hypertrophic cardiomyopathy

Version: 1 Date: 20 June 2009

Reviewer: Rosa Sicari

Reviewer's report:

This is an interesting study addressing a differential diagnosis of HCM. The manuscript is well written and the clinical case raises important clinical issues.

1. Please expand the differential echo diagnosis in HCM, still, elusive in some clinical settings
2. Are there MRI or 3D echo images of this individual patient?
3. Please upload more images.

Level of interest: An article whose findings are important to those with closely related research interests
