Reviewer's report

Title: The accessory papillary muscle with inferior J-waves--peculiarity or hidden danger?

Version: 1  Date: 20 October 2009

Reviewer: Rosa Sicari

Reviewer's report:

This is an interesting case report linking J wave and accessory papillary muscle. The same author has already published a report on U wave and accessory papillary muscle (Cardiovasc J Afr. 2009 Jul-Aug;20(4):256-7). Both conditions are quite unusual: J wave is not as benign as previously thought and the accessory papillary muscle may be the anatomic substrate for this EKG abnormality.

1. Please clarify why the patients sought medical advice
2. Please clarify the clinical implications of the case.
3. Please expand the discussion by citing recent publications on J wave and accessory papillary muscle.

Level of interest: An article of importance in its field
