Reviewer’s report

Title: Echocardiographic imaging of tricuspid and pulmonary valve abnormalities in primary ovarian carcinoid tumor

Version: 1 Date: 27 June 2010

Reviewer: Rosa Sicari

Reviewer’s report:

This is an interesting case report that merits publication in the journal. There are only minor issues that authors should address:

1. Please give more details on the clinical picture at presentation and of the echo features.
2. The discussion is a little bit too long and should be more focused on the several techniques that may be useful for the diagnosis. Maybe a table with different diagnostic accuracies.
3. Please expand the additive diagnostic value of combining imaging and circulating biomarkers in the present clinical condition.
4. Please upload clips (there is no space limit).
