Reviewer's report

Title: Improved cardiovascular diagnostic accuracy by pocket size imaging device in non cardiologic outpatients. The NaUSiCa (Naples Ultrasound Stethoscope in Cardiology) Study

Version: 1 Date: 11 November 2010

Reviewer: Lorenza Pratali

Reviewer's report:

In this study written by Galderisi M is reported the diagnostic value of a new pocket-size imaging device that can be used as ultrasound stethoscope in comparison with physical evaluation in a not cardiological population. This study is well presented and underline the added value of this new machine especially in expert hands as recommended by the ASE and EAE society for cardiac ultrasound evaluation in general.

Minor revisions
- The manuscript needs corrections in the English language before being published.
- It’ not clear who have performed the physical examination. Maybe should be useful to add this data in the methods section.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
