Reviewer's report

Title: Stress Induced Hypertensive Response: Should it be evaluated more carefully?

Version: 2 Date: 16 May 2011

Reviewer: Lorenzo Ghiadoni

Reviewer's report:

Major Compulsory Revisions

The review is overtly brief (only 1000 words when the instructions for authors suggest about 3000). The topic is very interesting but it is treated superficially. The usefulness of echocardiography in the setting of exercise hypertension should be better discussed. We suggest to divide the text with subheadings and to add figures and/or tables to clarify the key concepts.

Discretionary Revisions

The following citations should be cited:

Minor issues not for publication

• Page 3, last line: Nonsense statement

• Page 5, line 14: sustained should be substituted with “sustained”

Level of interest: An article of limited interest
Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
