Reviewer’s report

Title: What interventions do rural doctors think will increase recruitment in rural areas: A survey of 2778 health workers in Beijing

Version: 3 Date: 17 June 2013

Reviewer: Zhaorui Liu

Reviewer’s report:

The authors have addressed all of the comments pointed out by reviewers.

However, after the second revision, the background seems too long. I suggest the author delete any less relevant details. For example, the description regarding how the residences were categorized into agricultural or non-agricultural population in the districts of Beijing contains too many details. And it might not be clear for western readers.

For table 4, I suggest delete the column ‘Median score’, as the variable is not a real continue variable.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
