Reviewer's report

Title: Factors affecting motivation and retention of primary health care workers in three disparate regions in Kenya

Version: 2
Date: 16 May 2014
Reviewer: Steve Thomas

Reviewer's report:

I am very happy with the revisions made. Only one minor essential revision is needed:

In the methods section in the revised version the authors state that this paper limits itself to analysis of the results from the quantitative part of the survey. "This is misleading as the author do handle qualitative material. So I suggest something like "this paper focuses on the quantitative material but includes some qualitative results where such data provide additional insight". or something like that.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
