Reviewer's report:

Title: Community-owned Resource Persons for Malaria vector control: enabling factors and challenges in an operational programme in Dar-es-Salaam, Tanzania

General Comments:
This study describes the enabling factors and challenges in routine mosquito control and surveillance by Community-Owned Persons (CORPs) within the Urban Malaria Control Programme (UMCP) in Dar-es-Salaam, Tanzania. It also describes in details the usefulness of community participation in local mosquito surveillance and control in UMCP. The study appears to be well done and appropriate for publication in ‘Human Resources for Health’. The manuscript is precise and well written and effectively communicates findings of interest to readers of the Journal. The overall length and data presentation are fine. I therefore recommend acceptance as it is.

Major compulsory revisions:
NONE

Minor Essential Revisions
NONE

Discretionary Revisions
NONE

Data analysis and statistical analysis has been well explained and in my view it was adequately addressed.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
Declaration of competing interests:
