Reviewer’s report

Title: Community-Owned Resource Persons for malaria vector control: enabling factors and challenges in an operational programme in Dar es Salaam, Tanzania

Version: 2 Date: 13 July 2011

Reviewer: Maru Aregawi

Reviewer’s report:

The revised version has addressed all issues raised in the previous comments (review) except the section on in Results of 3.1. "....Contextual determinants of detection coverage identified through the guided walks". The content still is same as before and I don't see the intellectual use of the quotes from some interviewees. These are obvious problems and grievances in any community based activities and I had suggested authors to omit this content. With this correction the manuscript can pass for publication.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
