Reviewer's report

Title: Health Technology Reassessment of Non-Drug Technologies: Survey and Key Informant Interviews

Version: 1 Date: 17 November 2012

Reviewer: Donald Juzwishin

Reviewer's report:

An excellent, timely and relevant descriptive survey of the state of HTR on the international stage. Being in an organization where HTR is being implemented by the authors I found their treatment of the 8 dimensions of HTR helpful and instructive for future implementation work. This work is a beginning, it sets the stage for numerous challenges that future researchers and policy makers will be inspired to pursue in the areas of implementation science and knowledge translation. Areas for improvement for the authors to consider (1) the authors could have identified "principles" for future policy makers and researchers to think about in advancing an HTR process, (2) the authors point out that context matters as to how HTR is approached in different settings, can the authors say anything about how different settings are amenable to certain approaches versus others? An excellent primer to HTR setting the stage for much work for the future.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
